

Speaker of Session 01

ENERGY EFFICIENCY

Flouris Xeni is currently a PhD candidate in Cyprus University of Technology where he is also employed as a research associate at the Laboratory of Thermodynamics. His research interests concentrate around energy efficiency in buildings, solar systems and integrated renewable energy systems in building skins. He has been involved in research projects concerning energy efficiency of systems in buildings, building envelope thermal performance and thermal losses, organic photovoltaic and hybrid solar collectors for building integrated applications.

Prior his PhD commencement, Flouris Xeni served as a Research and Development Engineer in the private sector in Cyprus and Germany. From the above mentioned position he got involved in different projects regarding heat transfer analysis of various thermal processes.
